

Summary of Dashboard & Composer Breakout Session

- **Request to have individual package success/failure information in Dashboard**
 - ◆ Specifically the Babel package (which is inside facetspackage)
 - ◆ Modifications to Bilder & Orbiter script needed
- **Request to not eliminate validation from Composer**
 - ◆ Best if could be in code base where it would likely be up-to-date rather than doubly-maintained XML.
 - ◆ Possibly use documentation to do some validation until code base has this feature.
